-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Response to Amendment

1. The drawings were received on March 13, 2006. These drawings are accepted.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-5,8-12,15-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The claims recites a sign detector, among other things, that comprises a limiter configured to generate a resulting bit stream and circuitry to detect a double positive, or double negative, in the resulting bit stream. A sign detector (4020) is illustrated in Fig.40, seemingly corresponding to the claimed sign detector. However, the drawings fail to show the exact configuration of the limiter and circuitry to perform the claimed functions of generating a resulting bit stream and detecting a double positive, or double negative, in the resulting bit stream. The only reference to the claimed feature is found in the specification at page 68, paragraph [0222], which merely repeats the claim limitations. Since, the claimed sign detector was recited as a patentable subject matter, an embodiment showing a best mode should be disclosed. Without such a disclosure, it appears that one skilled in the art would not be able to make and use the claimed sign detector.

Allowable Subject Matter
